SUMMARY

Java Full Stack Engineer with nearly 5 years of active hands-on experience designing and building scalable distributed systems and enterprise applications using Java 17/21, Spring Boot 3.x, React 18, and microservices architecture. Delivered AI/ML integrations (fraud detection APIs, LLM-powered analytics, NLP pipelines) into production Java systems at Capital One and healthcare platforms. Expert in AWS EKS, Docker/Kubernetes, Kafka streaming, Jenkins CI/CD, and OAuth 2.0/JWT security. Reduced system latency 25%+ through optimized Spring Boot services and database indexing across banking, healthcare, and retail domains.

SKILLS

Programming Languages : Java 21, Java 17, Java 11, JavaScript (ES6+), TypeScript, SQL, Python
Frontend Technologies : React.js, Angular, Redux, HTML5, CSS3, JavaScript, AJAX, JSON
Backend Technologies : Spring Boot, Spring MVC, Spring Cloud, Microservices Architecture, Distributed Systems, Event-Driven Architecture, Hibernate/JPA, Spring Security, JUnit, Mockito
Cloud/Devops : AWS, Azure, Docker, Kubernetes, Helm, Jenkins, GitHub Actions, CI/CD pipelines, Terraform, Maven, Gradle
API / Security : RESTful APIs, GraphQL APIs, OAuth 2.0, JWT, OpenID Connect, Keycloak SSO, Swagger/ OpenAPI, REST Assured, mTLS
AI / Machine Learning : Generative AI (GenAI), Large Language Models (LLM) Integration, Natural Language Processing (NLP), AI/ML APIs, AI-assisted Fraud Detection APIs, GitHub Copilot for AI assisted development
Messaging & Streaming : Apache Kafka, JMS, Event-Driven Architecture, Event Sourcing
Databases : Oracle, MySQL, PostgreSQL, Cassandra, DynamoDB, MongoDB, Redis
Monitoring & Logging : Prometheus, Grafana, ELK Stack
Version Control & Tools : Git, GitHub, IntelliJ IDEA, VS Code, Postman
Methodologies : Agile (Scrum), DevOps, Unit Testing, System Design

EXPERIENCE

Java Full Stack Developer, Capital One, Plano, United States

Jun 2025 — Present

- Designed and built event-driven distributed systems handling 10M+ daily transactions; architected 15+ Spring Boot microservices using Spring Cloud (Eureka, Gateway, Config Server), reducing API latency 28% via reactive programming and connection pooling.
- Built AI-powered fraud detection platform integrating Python ML models (XGBoost, BERT) with Java services via Kafka streams; achieved 92% fraud detection accuracy, cutting false positives 35%.
- Engineered React 18 dashboards with real-time WebSocket updates and LLM chat interfaces for risk analysts, improving alert triage time 40%.
- Containerized services with Docker, deployed to AWS EKS with blue-green deployments via Jenkins/GitHub Actions; achieved 99.95% uptime.
- Implemented OAuth 2.0 + JWT with Spring Security across 20+ APIs; integrated Keycloak for SSO, significantly reducing authentication-related incidents.
- Built ELK Stack dashboards monitoring 10M+ daily transactions, reducing MTTR from 4 hrs to 45 min.
- Environment: Java 21, Spring Boot 3.x, Spring Cloud, React 18, Python (XGBoost/BERT), Apache Kafka, Docker, AWS EKS, Jenkins, GitHub Actions, ELK Stack, PostgreSQL, OAuth 2.0, Keycloak, WebSocket

Java Full Stack Developer, Northside Hospital, Atlanta, United States

May 2024 — Apr 2025

- Architected patient management microservices using Spring Boot + Azure AKS; designed distributed system processing 50K+ daily appointments with sub-100ms response times.
Integrated Apache Kafka for real-time lab results and notifications; implemented event sourcing pattern, cutting data sync delays 60%.

- Provisioned infrastructure with Terraform (Azure ARM templates); managed 50+ Kubernetes pods across dev/staging/prod, saving 20 hours/month in manual ops.
- Enhanced observability with Prometheus/Grafana + custom Spring Boot Actuator endpoints; reduced P99 latency outliers 32%.
- Led HL7 FHIR API development connecting Spring Boot services to Epic/Cerner EHR systems, enabling bidirectional patient data exchange for 15K+ daily records with 99.9% data accuracy and HIPAA/SOC2 compliance.
- Engineered patient portal using React 18 + Spring Boot backend with OAuth 2.0/JWT authentication, delivering self-service appointment scheduling and lab result access to 200K+ patients, cutting call center volume 38%.
- Environment: Java 17, Spring Boot 3.x, Angular 16, RxJS, Apache Kafka, Azure AKS, Terraform, Prometheus, Grafana, PostgreSQL

Java Full Stack Developer, Reliance Retail, Hyderabad, India

Feb 2022 — Jul 2023

- Built e-commerce platform with Spring Boot REST APIs + React 17 serving 2M+ SKUs; optimized MongoDB indexes, cutting catalog queries 25%.
- Designed domain-driven microservices for order/inventory management; used Kafka for async order processing, handling 10K orders/hour at peak load.
- Refactored legacy SQL stored procedures to JPA repositories + caching; reduced database load 40%, enabling 3x concurrent users.
- Led CI/CD transformation with Jenkins + Maven; automated 90% of deployments, cutting release cycles from 2 weeks to 2 days.
- Engineered real-time inventory sync using Spring Boot REST APIs + Redis caching across 2M+ SKUs, integrating Apache Kafka for cross-warehouse updates that eliminated 22% of stockouts during peak sales.
- Environment: Java 11, Spring Boot 2.x, React 17, Apache Kafka, MongoDB, PostgreSQL, Jenkins, Maven, JUnit, JPA, Redis

Java Full Stack Developer, HDFC ERGO General Insurance Company, Bangalore, India. Apr 2020 — Jan 2022

- Developed claims processing system with Java 11, Spring Boot, GraphQL APIs; supported 100K+ policies with sub200ms query performance.
- Integrated Apache Spark for insurance analytics; built fraud detection pipelines processing 1TB+ claims data daily, helped identify potential fraud worth \$2.3M.
- Implemented OAuth 2.0 + mTLS across partner APIs; achieved SOC2 compliance for claims data exchange with 50+ insurance partners.
- Migrated monolith to Docker microservices; reduced infrastructure costs 45% via AWS ECS auto-scaling.
- Optimized claims adjudication workflows using Spring Boot 2.x + GraphQL subscriptions for real-time status updates, automating 65% of routine claims (50K+/month) and reducing processing time from 7 days to 18 hours.
- Environment: Java 11, Spring Boot 2.x, GraphQL, Apache Spark, Docker, AWS ECS, PostgreSQL, Cassandra, OAuth 2.0, mTLS

CERTIFICATIONS

AWS Certified Developer Associate
 Oracle Java SE 11 Professional
 IBM Enterprise Data Science
 IBM Cloud - Based Mobile Solutions
 IBM Getting Started with Cloud for the Enterprise

EDUCATION

University of the Cumberlands, USA - *Master's, Information Technology*
 PRIST University, INDIA - *Bachelor's, Information Technology*
